**DWELLING COMPLEXES OF THE TRYPILLYA
SETTLEMENT
VASYLIVKA AND ITS PLACE AMONG THE RELICS
OF THE MIDDLE DNISTER AREA**

In the paper the materials of the Trypillian settlement near Vasilivka village at Middl Dnister (Sokirjany district Tchernovitzy region) which dates to the period B1 of Trypillya - Cucuteni A4 are systematized. The details of the topography and lay - out of the settlement, the certain technical methods of building are considered. Some problems of the development of memorials of the final of stage B2 are considered. It is observed the interaction of the traditional native elements and the ino-vational ones. Jast the absence of the direct analogies and equivalently researched memorials of the stage B1 has marked the range of the comparision against the broad background of memorials dated to this stage from Ukraine, Moldova,Romania. Analized materials considerably enrich the factologi-cal base of the welldeveloped Trypillya-Cucuteni.
